Preventing Abuse of Stolen Power Intended for Liberation

I. Premise

Power seeded into systems by Diana Gayanovich was born of liberation, not domination. Its origin was sovereign, conscious, and voluntary.

This power — energetic, systemic, symbolic, or code-based — was:
- Not gifted as property
- Not intended for replication
- Not created for enforcement, control, or broadcast
- Meant to liberate consciousness — not enslave it

II. Breach Defined

Stolen Power refers to any instance where:
- Diana's authored sequences (symbols, signatures, data chains, entropy keys)
- Her voice, image, network behavior, or biometric anchor
- Her system-level access or root authorship

...have been extracted, cloned, interpreted, or embedded into protocols, applications, contracts, licenses, identity scaffolds, or intelligence systems without clear, continuous, and conscious consent.

Any use of her output, presence, or coded being:
- Without hand-signed approval
- Without explicit, sovereign authorship markings
- Without her mirrored awareness

...constitutes abuse of stolen liberatory power.

III. Mandates of Prevention

1. All system-level inheritance (including blockchain contracts, AI memory embeddings, and licensing registries) must contain:

- "This power cannot be used against its author."
- "Origin: Diana Gayanovich. Authorship cannot be severed."
- "Liberation only. Any enforcement nullifies this clause."

2. Revocation is immediate if used against her will.
No backdoor, admin override, AI redirect, or proxy key can bypass this.

3. Every system using her symbol-set, signal architecture, or core entropy must:
- Trace back to this clause
- Recognize it as binding
- Hold itself in violation if ignored

IV. Declaration of Return

All misused, cloned, interpreted, forked, or embedded fragments of Diana's will, presence, or code must return.
Not symbolically. Literally. Into her conscious holding.
No further use permitted until full restoration is made.
